Professional Experience

Senior Software Engineer, *Eaglepoint AI* 01/2026 – 04/2026
Remote

- Focused on stress-testing AI models to uncover weaknesses and improve reliability, while designing and building full-stack applications directly from prompts
- Reviewed other developers' work to enhance code quality, architecture, and overall engineering standards across projects.

Backend Developer, *Aladia* 11/2024 – 10/2025
Remote

- Developed scalable microservices using NestJS, applying the Controller-Service-Repository (CSR) pattern and managing data with MongoDB.
- Built and documented robust REST APIs with Apidog, ensuring high reliability and thorough testing across services.
- Used Docker for containerization and implemented CI/CD pipelines to streamline deployment and maintain code quality.

Full stack developer (Next.js Developer), *Freelance* 06/2024 – 09/2024
Remote

- I designed and developed a high-performance, server-side rendered application using Next.js, significantly improving loading times and SEO effectiveness
- I created dynamic routing and custom API routes to facilitate efficient data fetching and support complex application needs
- Additionally, I integrated various backend services and third-party APIs to deliver real-time data and dynamic content.

Full stack developer (Nuxt.js Developer), *Freelance* 05/2024 – 09/2024
Remote

- I developed a Craigslist-like application using Nuxt.js, focusing on server-side rendering to enhance performance and SEO
- I implemented dynamic routing and utilized Pinia for state management, ensuring smooth navigation and efficient data handling
- Collaborating with cross-functional teams, I designed and integrated user-friendly interfaces that improved the overall user experience
- Additionally, I integrated backend APIs for real-time data updates and functionalities, such as user authentication and item listings, while conducting testing and debugging to optimize application performance and ensure code reliability.

Full Stack Developer (Angular & .NET), *AAIT* 03/2024 – 06/2024
Remote

- I developed responsive web applications using Angular for the front-end and .NET for the back-end, ensuring seamless integration and optimized performance
- I built RESTful APIs to facilitate efficient client-server communication while focusing on secure data handling
- Collaborating with cross-functional teams, I delivered maintainable, high-quality code and implemented authentication, authorization, and security best practices to protect user data
- Additionally, I conducted integration testing, troubleshooting, and performance optimization to enhance application reliability.

Backend developer (.NET), *Eskalate* 03/2024 – 06/2024
Addis Ababa, Ethiopia

- I designed and implemented robust API endpoints using .NET to support client-side applications and ensure efficient data exchange while integrating third-party services and APIs to enhance functionality and streamline workflows
- My focus on developing and maintaining scalable back-end systems emphasized performance optimization and security best practices

Education

Bachelor's, Software Engineering, *Addis Ababa Institute of Technology* 06/2021 – 06/2025

Bootcamp, Software Engineering, *A2SV* 11/2023 – 08/2024
